CHARACTERISTICS

- Great Attitude
- Work well under pressure
- Enjoy a challenging and fast-paced environment
- Determined to get the job completed
- Love working as part of a team

ABOUT ME

As a former Royal Navy personnel employed by the Ministry of Defence, I left college at the age of 18 and joined the Military as a Communications & Information System (CIS) rating, conducted basic training, and became a part of a 4-month operation across the Mediterranean Sea, working with a great deal of other NATO units as part of a NATO Maritime Response Force to deter criminal activity, and to defend and protect from threats of piracy and armed robbery.

Since leaving the Armed Forces I have begun to study for a degree in Cyber Security and in the near future hope to undertake the CompTIA A+ 220-1101 & 1102, Network+ N10-007 & N10-008, and CCNA 200-301 exams, allowing me to pursue a successful career in Cyber Security.

In my free time, I enjoy taking part in Capture the Flags (CTF's) such as HackTheBox. I also like to study and practice my computing skills by collecting Google Cloud Badges.
